

Vision

What should the project accomplish? What does it do?

The project's goal is to be a platform for students and teachers to help them organize with their extracurricular activities, in terms of information, inscriptions and more. Also, as an information center of all the advantages (promotions, discounts) the college gives to their students. The app itself is an alpha version of what it could be if it is accepted by the center of students (CEITBA). It shows how the information is well divided and organized in different sections, so the student can get full advantage of them. As well, it has some of the possible activities in which the students can participate, and the information of the activities they are already registered.

Why is it valuable? What problem does it solve?

The app could be really useful and helpful in terms of organization for the center of students in the college ITBA, known as CEITBA. Their current mechanism for exchange of registrations and information involves flyers, voice announcements or via email. With our app, students and teachers would be regularly informed of all the material they need. The app's data would be managed by the college, so everything they need to inform, would be possible. Therefore, the registrations speed would be higher, as well as the number of students getting involved in activities.

What is the acceptance criteria for the project? What needs to be achieved by when?

The primary objectives of the project would be to have a complete working app available of accepting/removing registrations of all kinds and show any type of information by December of 2019, that would be the final version to be presented to the center of students as a product for themselves. More ahead, the project aims to have a 10% of the students involved in the app by April of 2020 and a group of CEITBA workers doing maintenance and updating the information of the app by August of 2020.
